# Predicting Bike-Sharing Patterns

REVIEW

CODE REVIEW

HISTORY

## Meets Specifications

Great job on implementing a successful neural network! As we can see, the model overestimates bike ridership in December because it hasn't had sufficient holiday season training examples. The predictions generally are quite accurate, though!

## Code Functionality

All the code in the notebook runs in Python 3 without failing, and all unit tests pass.

Correct!

The sigmoid activation function is implemented correctly

Correct!

## Forward Pass

The forward pass is correctly implemented for the network's training.

Correct!

The run method correctly produces the desired regression output from the neural network.
